EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows to fix claim dependency issues:

In claim 23, line 1, the number "22" has been removed and replaced with 18.

In claim 24, line 1, the number "22" has been removed and replaced with 18.

In claim 26, line 1, the number "22" has been removed and replaced with 18.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance: In the examiner's opinion, the allowability of the claims, at least in part, resides in the recitation of an amplifier comprising a main amplifier subcircuit and an error amplifier subcircuit each directly mounted together on a single circuit board and wherein one of the lid structure and the chassis body further including a generally solid dividing wall of greater thickness than the side walls, extending between the main amplifier subcircuit and the error amplifier subcircuit, in combination with the recited limitations of each of the independent claims.

The Posner, Casebolt, Jewell references do not disclose providing a generally solid dividing wall of greater thickness than the side wall.

While it is shown in Powell (see figures) that the generally solid dividing wall is of greater thickness than the sidewalls, the claim limitation that the main amplifier subcircuit and an error amplifier subcircuit are each **directly** mounted together on a single circuit board is not disclosed and cannot be met. It is taught in the reference that the main and error amplifiers 14 and 50 are each formed on substrates 60. The substrate containing the main amplifier and the substrate containing the error amplifier are each mounted on individual copper heat sinks 60. The heat sinks are then mounted to board 68.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phuong T. Vu whose telephone number is (571) 272-2111. The examiner can normally be reached on Mon. & Tues., 7:30 AM - 4:00 PM.
